

KEY INFORMATION

BUILDING TYPE:

Custom design

WIDTH:

30.00m x 2

LENGTH:

95.00m

EAVE HEIGHT:

6.00m

ROOF TYPE:

Insulated 60/40mm sandwich panel

WALL TYPE:

Insulated 60mm sandwich panel

Schwarzwald-sprudel GmbH is a leading producer of bottled table water and a subsidiary of Edeka.

The company needed to expand their operation with additional on-site production and storage space. After considering the different options they chose an HTS INDUSTRIEBAU steel building.

Schwarzwald-sprudel had some very specific requirements for their building which some steel building providers would not have been able to accommodate. Choosing HTS INDUSTRIEBAU however meant they could custom-design their own structure and still retain the fast lead time and affordable cost.

Two buildings were provided each 30 metres wide by 95 metres long and with a 6 metre wall height. Combining a steel roof with a PVC Thermo roof the structure created the insulation properties needed alongside the fast and efficient installation time.
